

MaaS360 from IBM

making it simple to manage your phones

- ✓ Businesses are becoming more and more mobile. Using smartphones and tablets to work on the go can save time and improve productivity.
- ✓ But managing a growing list of devices connecting to the network, and keeping everything secure, isn't always easy.
- ✓ We have a simple, fast and comprehensive way to deploy and manage those devices. Wherever they are. Whoever they belong to.

39% of users have downloaded malware onto a mobile device

74% of small and medium businesses suffered a security breach in 2015

management & security made easy

- ✓ The future of business is clearly through device connectivity and mobility, allowing anytime, anywhere business operations.
- ✓ But we all know that mobile phones and tablets can easily be lost, stolen or hacked. And that as well as losing your device, you risk losing your confidential business data too.
- ✓ Threats of 'bad things' entering the business and 'good things' leaving the business through mobile devices is a modern day reality.
- ✓ Unmanaged devices can be a security risk, as hackers unleash sophisticated Trojans, keyloggers, phishing attacks and malicious apps on a daily basis.

In 2014, over **10 million** mobile devices were lost or stolen in the UK alone.

the control you need. in one place.

- ✓ Cloud-based, MaaS360 is easy to set up and use:
- ✓ One portal to manage all mobile devices
- ✓ Doesn't affect the user experience
- ✓ Works across all major mobile platforms
- ✓ Control how and what devices can connect to your network
- ✓ Ensures security and compliance
- ✓ Improves your mobile device reporting and management.

You can get up and running in **minutes**, it's that simple to use.

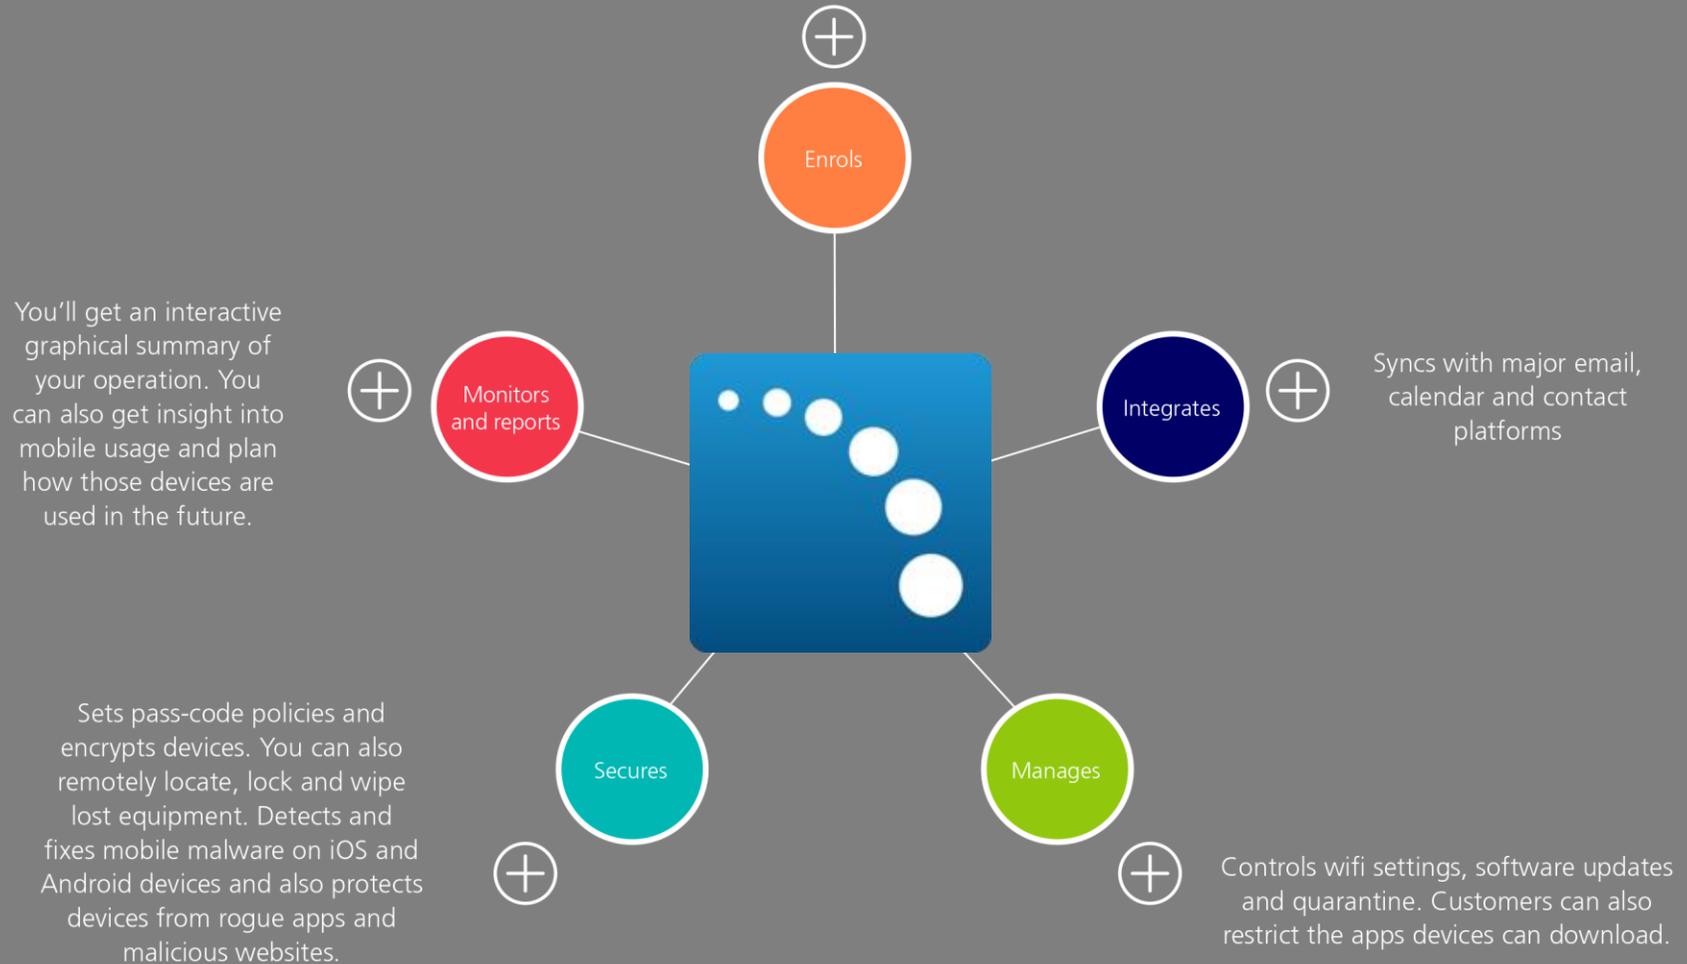

make flexible working a reality
